Access Networks Gets Décor-Friendly With New Access Point Enclosure

Customizable enclosure conceals unsightly access points in the ceiling or wall, elegantly facilitating uniform Wi-Fi coverage throughout most residential environments

Encino, CA, August 9th, 2017 – Access Networks (accessca.com), the premier provider of enterprise-grade network solutions for residential integration, has introduced a one-of-a-kind Access Point Enclosure (AP Enclosure), enabling integrators to conceal Wi-Fi range-extending devices in optimized locations throughout the home within ceilings or walls. The customizable enclosure features round or square paintable magnetic cover options to suit any décor and has been engineered for the Ruckus R310 and R510 series of access points though the enclosure can be used with any access point, size allowing.

The Access Networks AP Enclosure has been engineered to simplify installation for professional integrators, featuring four keystone knock-outs for the most popular brands to allow incoming cable connections as well as utilizing the internal switch capability of most Ruckus access points. The paintable magnetic covers enable a quick and easy reveal for service or future upgrades, and a new-construction ring is available for proper placement before drywall. The enclosure also features side ventilation to keep any heat generated by the access point rising out of the enclosure while minimizing the presence of attic dust or insulation. Most critically, optimized access point locations deliver superior Wi-Fi coverage throughout the home, resulting in happier clients and fewer service calls. The Access Networks AP Enclosure has been built to last and keep access points secure in their place, featuring robust installation hardware. Integrators will appreciate the peace of mind knowing that access points won't get knocked around or inadvertently disconnected.

“We brought the AP Enclosure to market as a direct response to feedback from integrators regarding the challenges they were facing finding discreet, secure locations for access points,” explained Access Networks CSO Bryce Nordstrand. “This solution can be easily customized to match any décor—it brings tremendous value to the client and added profitability for the integrator.”

The Access Networks AP Enclosure is available for pre-orders today, shipping September, 2017. MSRP \$139 US including choice of cover.
